

Changing Platts Sarus to use HTTP instead of FTP

1). Right click on the Sarus Scheduler  on the windows taskbar (the black/grey clock) and select the 'Manual Download' menu (see below).

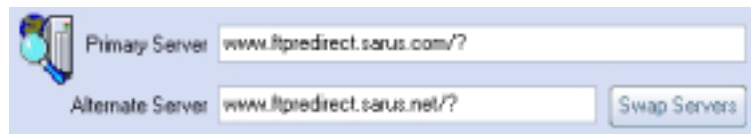

2). Click on the 'View/Settings' menu (see below) or press the F5 key.

3). Right click on the image to left of the primary server legend and select the 'Download from Sarus Redirect site' menu (see below).

4). The primary and secondary server will be changed from an 'ftp' address to a 'www' one (see below).

Click on the 'Save' button and select 'Yes' when asked to save the changes.

The software is now configured to download using HTTP which is firewall friendly.
